🔗 Developer-Portfolio

EDUCATION

BSc (Honours) Computer Science | University of Manchester

Sep 2021 – Jul 2025

- **Achievements & Activities:** Graduated with honours being placed in the Second class, Division one (2:1 classification), First Class in User Experience module, Developed an **AI agent for Hex** with a 74.1% win rate and ranked **19th** in speed (78.6 mark) among all submissions, Integrated **Spotify API** into '**GhostTyper**' for real-time music playback; Optimised database efficiency with MySQL indexing and caching, improving query speed by **30%**. Enhanced user engagement by dynamically adjusting difficulty based on lyric tempo.
- **Coursework:** Designed processors in Verilog, Built Amazon-clone backend in PHP/MySQL, Developed Othello AI with alpha-beta pruning in Java, Created video games with Tkinter and JavaFX, Conducted CIFAR-100 CNN experiments, Completed Computer Vision module with full marks in image filtering/object detection, Developed enterprise web app using REST APIs, Explored AI through game AI, constraint satisfaction, and robotics labs

Higher Secondary Certificate, Class XII | Shubham Raje Jr. College, Thane, India

2021

- **Marks:** 97.5% (Mathematics & Statistics: 99%; Computer Science: 97%)

Indian Certificate of Secondary Education, Class X | HFS, Thane, India

2019

- **Marks:** 94% (Mathematics: 97%; Computer Science: 100%; Science: 94%)

WORK EXPERIENCE

Technical Support Engineer | Beckhoff Automation Limited

Oct 2025 – Present

- Provide first-line technical support across **TwinCAT 3 PLC/HMI**, **EtherCAT** networks, **Beckhoff IPCs**, I/O and motion—trianing tickets, reproducing issues, and delivering fixes/workarounds.
- Build customer-facing **demo projects & proof-of-concepts** (e.g., **TwinCAT Machine Learning**/ONNX deployments, basic **Vision** pipelines) to accelerate adoption and de-risk integrations.
- Create **clear documentation** and knowledge-base articles; capture learnings and feed product feedback to engineering; support short **enablement sessions** for customers and colleagues.

Food & Beverage Assistant / Team Leader | Stockport County FC

Feb 2024 – Sep 2025

- Delivered high-volume service to over **1,000+** customers on matchdays in a fast-paced stadium environment, ensuring speed and accuracy under pressure.
- Led bar operations during peak periods, supervising and coordinating shifts of up to **10** staff, improving overall service efficiency by approximately **20%**.
- Expanded role into retail operations, serving as a **club shop assistant** handling matchday merchandise sales and stock management.

Front of House / Team Leader | Manchester United FC

Jan 2022 – Jun 2025

- Served tens of thousands of customers across **3 Seasons** at Old Trafford, consistently meeting high hospitality standards during Premier League and cup fixtures.
- Managed small teams of **5–8** staff in high-pressure service areas, ensuring smooth operations and fast turnaround during peak demand.
- Built strong customer relationships, resolving service issues promptly to maintain satisfaction scores above **90%**.

PROJECTS

Walking on Words (Final Year Dissertation)

Sep 2024 – May 2025

Formalised a novel “walking” model of word generation, extending primitive-word theory to bounded-step surjective walks. Designed and implemented algorithms to explore combinatorial properties, achieving efficient $O(n^4)$ solutions and validated results via experimental evaluation. Commended by examiners for depth and rigor.

Formula Student AI Developer | Manchester Stinger Racing Society

Sep 2023 – Jun 2024

Headed a team of **5** developers in designing and implementing the first AI iteration for the society’s autonomous racing vehicle, achieving milestone completion ahead of schedule.

Full-Stack Developer | UniCS Development Team

Sep 2023 – Jun 2024

Designed, built, and maintained an internal events database and public-facing website used by **1,000+** students for society event management. Implemented responsive front-end features and optimised backend performance, reducing page load times by approximately **35%**. Coordinated with multiple society committees to gather requirements, prioritise features, and deploy updates in line with event calendars.

Enigma Simulator – Cryptography Tool in Go & React

In Development

Designing a cross-platform simulator for the WWII Enigma machine using Go for backend cryptographic logic and React + TailwindCSS for the UI. Implemented historically accurate rotor mechanics, plugboard wiring, and step-by-step encryption visualisation for educational use.

TECHNICAL SKILLS & CERTIFICATIONS

- **Software Development:** MERN Stack, Tailwind, Bootstrap, JavaScript, TypeScript, Next.js, Django, Spring, PHP
- **Data Science & ML:** Dash, scikit-learn, TensorFlow, PyTorch, Transformers (Hugging Face), OpenCV, SpaCy, SciPy
- **Others:** Go, Python, Java, C, C#, C++, React, Haskell, Leaflet.js, REST API, ARM Assembly, Verilog, SQL, Docker, AWS, HTML, Experienced with GitLab & Github, large codebases, debugging, and agile development
- **Certifications:** Software Engineering - JP Morgan & Chase
